

Privacy Policy — RTI Wiki Android and iOS app

Effective date: 19 April 2026

*This policy governs the **RTI Wiki** companion mobile application for Android and iOS, published by BigHelpers Software & Solutions Pvt Ltd. It does not replace the general RTI Wiki website terms.*

1. What we collect

Nothing personal. The app does not collect, store, or transmit any personally identifiable information. Specifically:

- **No account** is required. There is no sign-up or sign-in.
- **No analytics** are integrated. No Google Analytics, no Firebase, no Mixpanel, no Amplitude, no other telemetry platform.
- **No advertising identifier** is read. The app does not access the Android Advertising ID, the iOS IDFA, or any fingerprinting signal.
- **No location** is requested or recorded. The app does not ask for GPS, Wi-Fi, cellular, or IP-based location.
- **No contacts, photos, microphone, camera, calendar, or SMS** are accessed.

2. What stays on your device

Two pieces of data are saved **only on your phone's local storage**, never transmitted:

- Your selected **role** (Citizen, PIO, First Appellate Authority, or Researcher).
- Your **bookmarks** — the articles you have saved for later.

Uninstalling the app removes both immediately.

3. Network requests the app makes

The app makes three kinds of outbound network requests, all over HTTPS:

(a) Article content

When you open an article, the app fetches the rendered page from **righttoinformation.wiki**. The request contains only the path of the page, no user identifier. The wiki server's webserver logs the request (IP address, timestamp, user agent) as part of ordinary server logging, same as any website visit. Logs are rotated and not shared with third parties.

(b) Blog RSS feed

The **Blog** tab fetches the wiki's public RSS feed at ``/feed.php?mode=list&ns=blog``. Same logging behaviour as (a). No identifiers are added.

(c) AI Mentor tips

When you open an article, the app may request a short mentor tip from a proxy endpoint at ``https://righttoinformation.wiki/ai-proxy.php``. The proxy forwards a minimal request to

Anthropic's API containing only:

- Your currently selected role (four possible values).
- The title of the article you are reading.

No personal information, no identifiers, no tracking tokens are sent. The proxy does not log the forwarded request beyond standard webserver access logs. If the AI service is unavailable, the app falls back to a small set of locally bundled tips.

4. Third-party services

Service	Purpose	Data shared
righttoinformation.wiki	Source of all wiki articles and the blog feed	The article path, plus standard HTTP headers (IP, user agent) that any website receives
Anthropic (via our proxy)	AI Mentor tip generation	Role label and article title. No user identifier.

No other third party receives any data from this app.

5. Children

The app is rated for **everyone** but contains legal content better understood by adults. We do not knowingly collect any information from children. If you believe a child has somehow used the app in a way that required personal information (given that we collect none), please contact us at the address below and we will confirm no records exist.

6. Data security

Because we do not operate a backend user-data store, there is no user database to breach. Local bookmarks and role selection are stored in the phone's sandboxed app storage managed by Android or iOS, protected by the device's own security model.

7. Your rights under the Digital Personal Data Protection Act, 2023

The DPDP Act, 2023 gives you rights of access, correction, erasure, and grievance redressal. Because we hold no personal data about any user, there is no record to access, correct, or erase. If you nevertheless wish to exercise a right or raise a grievance, contact us and we will respond within the statutory time.

8. Changes to this policy

If we change how the app handles data, we will update this page and change the effective date above. Material changes will also appear in the app's own in-product About screen. Continued use after an update constitutes acceptance.

9. Contact

Publisher: BigHelpers Software & Solutions Pvt Ltd

Grievance officer and data contact: ad@bighelpers.in

Postal: Write to the above email for the current postal address.

We respond to privacy requests within seven working days and to grievances under the DPDP Act within the statutory thirty days.

10. Summary in one paragraph

This app reads public articles from righttoinformation.wiki, saves your role and bookmarks on your phone, and optionally requests a short AI-generated tip that knows only your role label and the article title. It collects no personal data, uses no analytics, and shows no ads.
